Hey!

I am a recent architecture graduate with a strong interest in designing spaces that are both thoughtful and emotionally resonant. My approach to architecture is grounded in careful observation of context, climate, materiality, and the ways people experience and inhabit space.

Through academic and design explorations, I have built a process that values clarity, spatial sensitivity, and purposeful simplicity. I am particularly interested in projects that engage with landscape, healing environments, adaptive experiences, and human-centered planning strategies where architecture supports both function and atmosphere.

I see architecture as an evolving practice of questioning, learning, and refinement. This portfolio reflects my exploration of design as a meaningful and responsible discipline balancing conceptual thinking, technical understanding, and practical decision-making.

INTERIOR WORKS

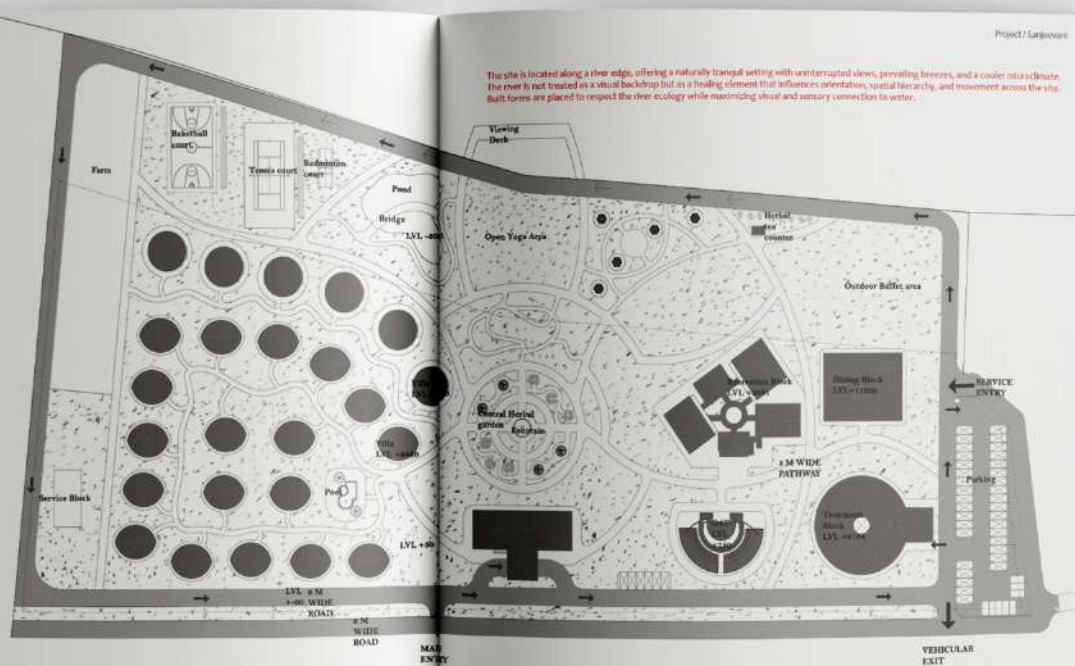

Architecture | Landscape | Urban

01 SANJEEVANI

Typology: Ayurvedic Wellness Retreat
Location: Calicut, Kerala

Sanjeevani is an Ayurvedic wellness retreat conceived along a riverside landscape, where water, vegetation, and open space become active components of healing. Rooted in Ayurvedic philosophy, the project treats wellness as a gradual and immersive process, supported by architecture that is calm, porous, and deeply connected to nature.

The intent was to design a retreat that allows users to disconnect from routine life and reconnect with natural rhythms. The architecture aims to slow movement, encourage pauses, and create moments of reflection. Spaces are designed to feel non-institutional, reinforcing the idea of wellness as an experience rather than a treatment.

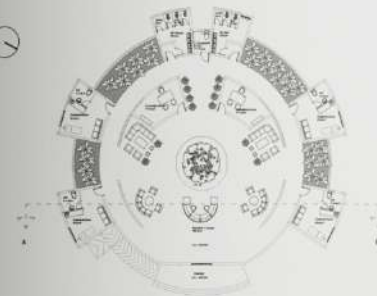

PLAN

SECTION AB

PLAN

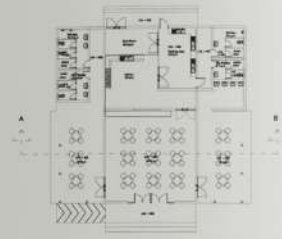

SECTION AB

FRONT ELEVATION

An open planning concept was adopted, with buildings arranged as low-rise clusters rather than continuous blocks. This approach ensures uninterrupted visual corridors towards the river and landscape. The master plan prioritizes pedestrian movement, with vehicular access restricted to the periphery to maintain a quiet, healing environment.

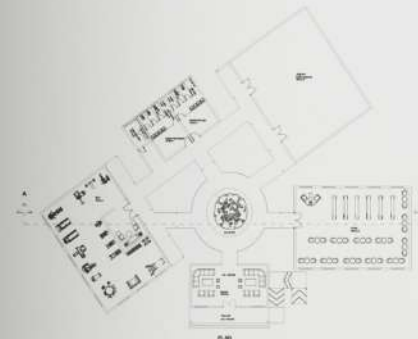

PLAN

SECTION AB

FRONT ELEVATION

Buildings are oriented to harness prevailing winds from the river, reducing dependence on mechanical cooling. Shading devices, deep overhangs, and landscape buffers enhance thermal comfort. The design respects the natural terrain and drainage patterns, ensuring minimal disturbance to the riverside ecology.

02 ANTARA

Typology: Residence
Location: Malappuram, Kerala

Antara is a residence conceived through layers, thresholds, and in-between spaces. Rather than relying on a central courtyard, the house draws light and ventilation through patios, terraces, and vertical visual connections, creating depth while maintaining privacy. The planning follows a clear sequence from formal to informal to private zones, allowing everyday activities to coexist without overlap. The design prioritizes spatial balance, controlled openness, and a calm domestic rhythm, shaping a home that unfolds gradually and intuitively.

Project / Antara

The planning of Aritara developed from organizing functions based on daily use and privacy requirements. Active and social spaces were arranged to address movement and accessibility, while quieter functions were positioned away from high traffic zones. The final layout reflects a rational, step-by-step refinement of functions into a coherent residential form.

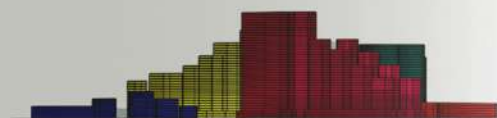

03 DISTRICT CENTRE

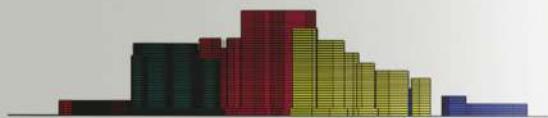

Typology: Urban Design
Location: Sector 91, Noida, UP

The District Centre at Sector 91, Noida is envisioned as a contemporary urban core that responds to the city's growth as a transit-driven environment while prioritizing human-scale public life. The project reinterprets high-density development through a pedestrian-first framework, structuring movement, activity, and built form to create a cohesive and accessible urban experience. By balancing landmark high-rise development with active ground-level public realms, climate-responsive strategies, and permeable site edges, the design aims to establish a vibrant, inclusive district centre that supports mobility, commerce, and everyday urban interaction.

04 GREENCREST RESIDENCY

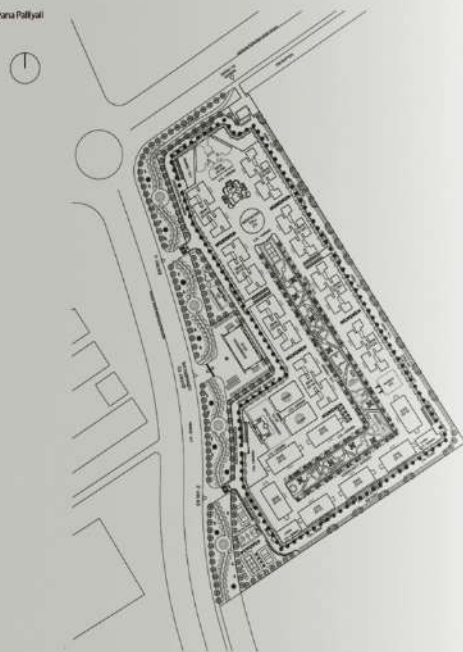

Typology: Housing

Location: Sector MU, Greater Noida, UP

Greencrest Residency, located in Sector MU, Greater Noida, is envisioned as a compact residential community designed around everyday living patterns. The project prioritizes walkability, shared open spaces, and convenient access to daily needs, reducing dependence on private vehicles while enhancing neighborhood interaction. Housing blocks are organized to support comfort, accessibility, and a sense of community, creating a livable residential environment that aligns with sustainable urban growth.

05 MISCELLANEOUS

Here are some of my miscellaneous works, comprising architectural photography and selected workshop outputs. This section reflects my interest in observing spaces, capturing spatial character, and engaging with design through hands-on explorations. Together, these works document a parallel way of thinking and learning that complements my architectural projects.

INTERNSHIP WORKS

Firm: Renu Robin Design
Location: Greater Kailash 2, New Delhi

renu robin Design is an award winning design firm focusing on high quality projects. We are passionate about design and handle all projects with simultaneous integration of structure, architecture & interior fields from the beginning of the design process with high level of detailing and personalised attention.

Project / Sanjeev's

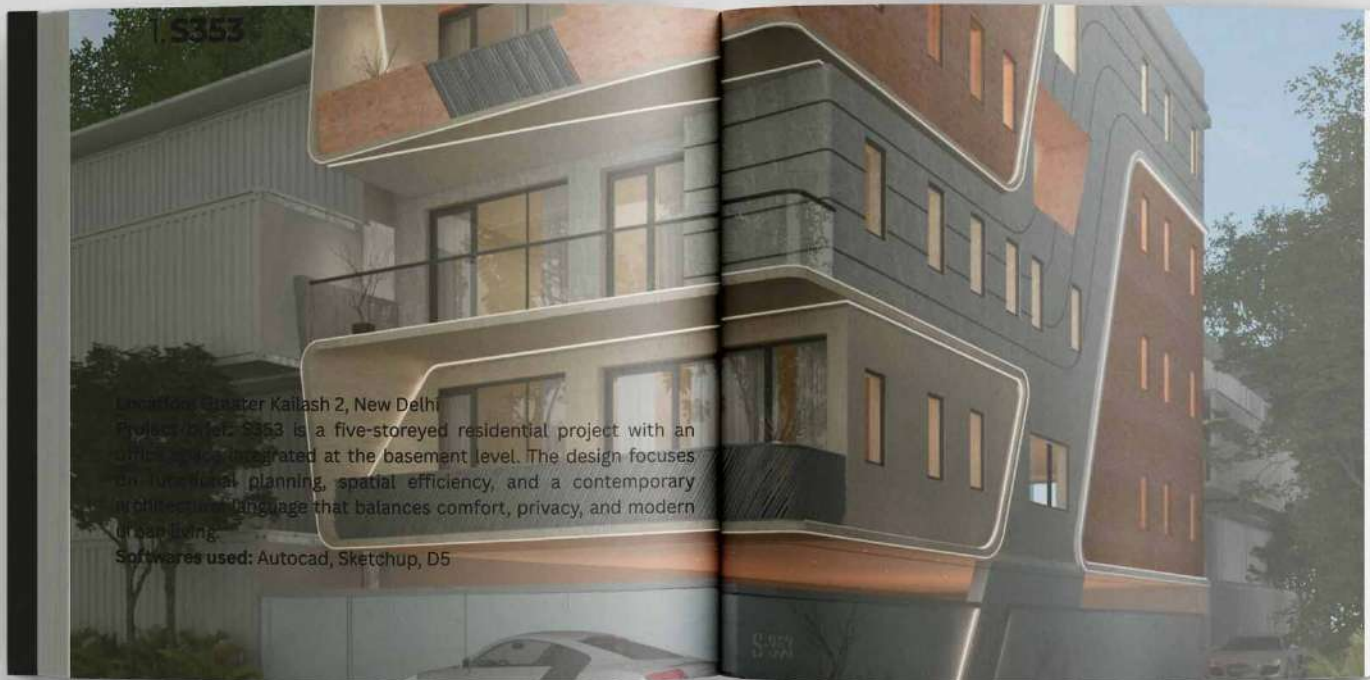

S353

Location: Gurgaon Kailash 2, New Delhi

Project brief: S353 is a five-storeyed residential project with an office space integrated at the basement level. The design focuses on functional planning, spatial efficiency, and a contemporary architectural language that balances comfort, privacy, and modern urban living.

Softwares used: Autocad, Sketchup, D5

Thank you.
